

ACCESS MANAGER PRO

A proven, out-of-the-box solution that controls the functions users have access to within your OpenText/SAP Extended ECM platform.

- ✓ Limit access to functions
- ✓ Stay compliant with regulatory and license obligations
- ✓ Minimise information security risks

When audits show your users are doing things they shouldn't be able to, what do you do? Extended ECM provides no way to limit access to individual functions leaving your organisation at high risk of information security and compliance

Limit access to functions

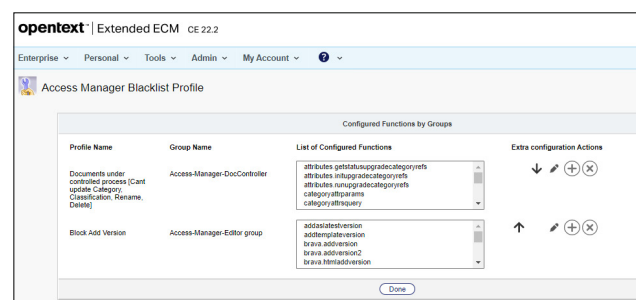

At Fastman, we know that you want to be an organisation with secure and trustworthy content that remains compliant with licensing requirements. In order to do that, you need full control over the functions your users have access to. The problem is that you're unable to limit access to functions with the standard OpenText / SAP Extended ECM, which makes you concerned about your users doing things they shouldn't be able to. We believe you should have full control over the things your users can do, regardless of how they are accessing the system.

Do you...

- Rely on end-user training in order to comply with policies
- Create internal quick-fixes and reports to resolve errors once they've occurred
- Pay fines or purchase full-user licenses for policy over-runs
- Trust that users will only do what they are supposed to

You should be able to control the functions your users can perform

We understand the challenges you have with access control, which is why global organisations implement Access Manager Pro as a proven, out-of-the-box solution.

Access Manager Pro blacklist profile

Require access to function message

Stay compliant with regulatory and license obligations

Fastman Access Manager Pro provides complete control over the functions that users have access to, ensuring compliance with regulatory and license obligations, and minimising information security risks. Stop relying on inefficient and ineffective quick fixes, and instead remain confident that your information security and license compliance risks are under control.

The Extended ECM Information Security experts

With over 12 years of experience working extensively with Extended ECM permissions, Fastman is the leading authority on Extended ECM information security. Together, Fastman and Access Manager Pro bring a unique combination of technological capabilities and OpenText product know-how that can be matched nowhere else.

Start the conversation so you can have complete control over the functions that users have access to, ensuring compliance with regulatory and license obligations, and minimizing information security risk.
