

# PERMISSIONS MANAGER + ACCESS MANAGER SE

The only solution for OpenText Content Suite and Extended ECM users that are serious about the security of their business content and information.

- ✓ Secure your Content Suite and Extended ECM information and content
- ✓ Bulk manage access controls across hierarchies and collections of content
- ✓ Quickly spot anomalies with comprehensive permissions dashboards
- ✓ Detailed permission audits and roll-back for erroneous changes

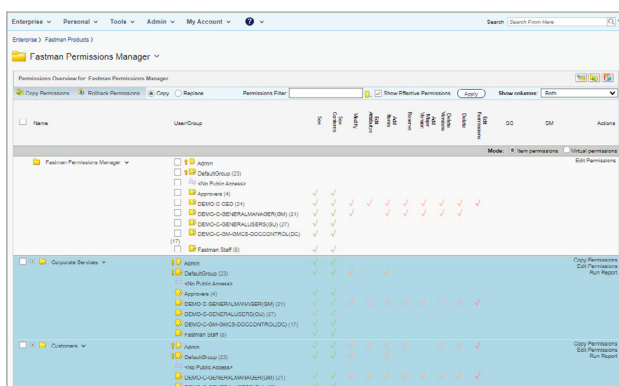

Security breaches are an unfortunate reality in the modern connected world. With so much critical information stored in OpenText Content Suite and Extended ECM repositories, minimising potential exposure is essential. Whether that risk comes from external or internal sources, any weaknesses must be addressed quickly and with confidence.

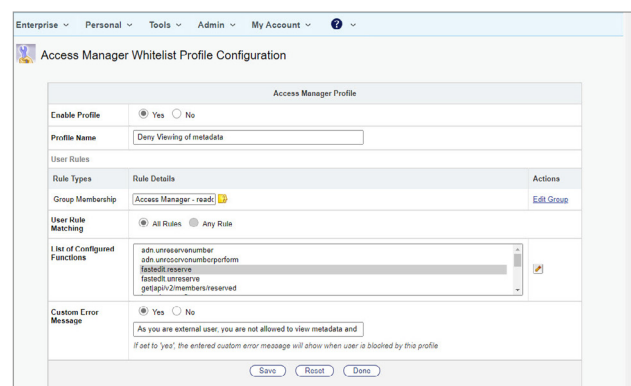

## Deliver sound internal information controls

Permission structures in Content Suite can easily get out of hand and become difficult to manage. For this reason, ensuring your business has the tools and processes in place to effectively retain control is critical. Permissions Manager is an essential component of all sound internal information control solutions. It provides core capabilities that enable administrators and power-users to quickly identify, address, and avoid information leaks.

By stripping away complexity, Permissions Manager makes often unseen, or unrecognized, layers of information available. Its concise dashboards provide administrators and management with a detailed overview that outlines current access rights and flags unusual or anomalous permission settings. With the ability to view information on individual folders, across collections of content, or throughout the whole repository Permissions Manager makes complex information security configurations manageable.

## Reducing the burden of permissions administration

Through its decentralized approach, Permissions Manager enables business users to retain control of their own data. By providing simple tools that enable individual users to view current permissions and apply pre-approved access templates, business users no longer need to turn to IT or the service desk to perform basic tasks.

With most organizations having internal governance policies that determine who can and cannot manage access to information, Permissions Manager also provides a comprehensive set of supporting controls. From specific functions, down to individual users, it allows administrators to define exactly what can be done and by whom. It also provides permissions roll-back, permissions search, and detailed audit logs that deliver a level of control far beyond those available in the standard Content Suite.

Implementing Fastman Permissions Manager requires no professional services or supplementary development effort. It installs out-of-the-box, can be operational in hours, and is proven with organisations around the world.

With over 12 years of experience working extensively with Content Suite permissions, Fastman is the leading authority on Content Suite and Extended ECM information security. Together, Fastman and Permissions Manager bring a unique combination of technological capabilities and OpenText product know-how that can be matched no-where else.

## BENEFITS OF PERMISSIONS MANAGER + ACCESS MANAGER SE

### Comprehensive permissions management for OpenText

Detailed dashboards and powerful bulk management tools for security conscious management and administrators.

### Simplifies complex administrative activities

Graphical interface requires minimal administrative expertise. Complex access structures can be readily understood and changes quickly made.

### Minimize the risk of information security breaches

Provides essential capabilities to quickly identify, address, and avoid information leaks.

### Reduced cost of change management

No need for business users to go to IT or the Service Desk to perform simple permissions tasks.

### Off-the-shelf and operational in an hour

Permissions Manager is significantly faster to deploy and more cost effective than alternative options.

### Access Manager SE

Lock down xECM to restrict key functions by group. Configure Read-Only access to enforce your licensing policy.
